ASYMMETRICAL DIGITAL SUBSCRIBER LINE

A. General

Asymmetrical Digital Subscriber Line (ADSL) enables a single copper wire pair to simultaneously carry voice signals and high speed digital data signals. The applicable speed at which the data signals travel over the local loop and the rates and charges associated with that speed, shall be determined by the customer-chosen **service**, as described in Paragraph D. The basic **service** can be enhanced to provide the customer with a secure connection to a corporation's local area network. Rates and charges associated with the enhancement can be found in Paragraph D.3.

(T)
(T)
(D)
(D)

Direct ADSL service is also available in this tariff. **Direct ADSL is provisioned to accommodate a static Internet Protocol (IP) address, which is needed** to support video-conferencing, virtual private network and security solutions. **The customer is responsible for requesting a static IP address from their service provider.** A description of this offering and the associated rates can be found in Paragraph D.4.

(T)
|
(T)

ADSL is provisioned by placing customer-owned equipment at the customer premises and company-owned equipment at the central office. This equipment allows customers to use existing or additional local access lines to transmit and receive high-speed data to and from one or more, predetermined, Service Provider (SP) networks.

(T)

The customer-chosen SP's network must be capable of receiving ADSL traffic. This can be achieved through the use of high-capacity Wide Area Network (WAN) data connection services. Currently 10mb and 100mb ports, such as found in CBT's LAN Advantage® tariff, will enable the SP's network with the capability to receive ADSL data signals. As ADSL standards evolve, other WAN data connection services will have the capability to receive ADSL data signals. The rates and charges associated with these services will be in addition to the ADSL rates and charges and will be the responsibility of the SP.

ADSL shall be available in central offices, as specified by Cincinnati Bell Telephone, subject to equipment availability and the technical feasibility of each individual access line, as determined by Cincinnati Bell Telephone.

B. Definition of Terms

1. Customer: The end user who uses the information that is accessible through a Service Provider.
2. Dedicated Connection: A 1:1 connection from the end user to the ADSL modem located in the Central Office.
3. Demarcation Point: The point of physical separation of CBT's network and associated responsibilities, from the Customer's network and associated responsibilities. The location of the Demarcation Point shall be the network interface device for ADSL provided by CBT to the customer (end user).

B. Definition of Terms (Cont'd)

4. Downstream Speed: The transmission speed in "kilobits (Kbps) and megabits (Mbps) per second" from the SP's network to the customer premises. (T)
5. Service Provider (SP): Includes a wide variety of information service providers such as, Internet service providers, enhanced service providers, corporations and higher educational institutions, all of which will allow an end user to have access to sources of information. (T)(M)
(M)
6. **Static Internet Protocol Address**: **The number assigned to a customer's computer that is used to identify the computer when information is being transferred among computers, over the Internet. Static means that the IP address does not change.** (T)
(T)
7. Upstream Speed: The transmission speed in "kilobits (Kbps) and megabits (Mbps) per second" from the customer premises to the SP's network. (T)

C. Regulations

1. CBT shall qualify the local access facility between the customer's location and the customer's serving central office. The purpose of this qualification is to determine the availability and suitability of existing CBT copper facilities to provide ADSL. CBT will not provision ADSL on facilities that are not compatible with ADSL.
2. CBT shall advise the customer of the customer premises equipment and software necessary to support ADSL.
3. CBT shall use its best efforts to provide the upstream and downstream speeds that are selected by the customer, up to and/or from the SP's network. Data speeds set forth in Paragraph D., are peak speeds and actual speeds may be impacted by factors such as facility length, SP's network capability and other technical factors. Therefore, data speeds are not guaranteed or warranted.
4. The customer shall have a local access line. Access lines may be purchased as set forth in the Exchange Rate Tariff and certain sections of the General Exchange Tariff.
5. Customer shall provide, install and maintain, at their expense, all equipment and software necessary for ADSL on the customer's side of the demarcation point. Customer shall be responsible for insuring that the customer premises equipment and software conform to the specifications that CBT shall provide to the customer in connection with this tariff.
6. Customer may purchase the customer premises equipment and software necessary for ADSL from any available source.

C. Regulations (Cont'd)

7. Prior to requesting repair service from CBT, the customer shall use their best efforts, including but not limited to performing reasonable diagnostic tests and working with their SP's, to verify whether any trouble with ADSL is a result of the customer premise equipment. The customer shall be responsible for any such trouble resulting from the customer premise equipment. A "Maintenance of Service Charge", as it appears in this tariff, will apply if CBT conducts a service call and the customer premise equipment is found to be the source of the trouble. (M)
8. When a SP orders ADSL on behalf of a customer, Cincinnati Bell Telephone will obtain the customer's approval before installing ADSL on the customer's line. (D)
9. When a customer requests the capability to connect to a corporation's LAN or to a higher educational institution's Intranet, an administrator representing these entities must provide authorization prior to the customer receiving the capability. (T)
10. **Dedicated connections are standard with the Basic and Direct ADSL services.** Dedicated connections may be limited by availability of facilities. (T)
11. ADSL cannot be functional unless the SP's network is equipped with the appropriate facilities that are needed for ADSL. (T)
12. ADSL will be available 24 hours per day, 7 days per week, except as required to upgrade, enhance, maintain and/or repair ADSL equipment located in the Central Offices. CBT reserves the right to perform scheduled maintenance and upgrades, as needed, during off-peak hours, normally on Sundays from 2:00 a.m. to 6:00 a.m. Emergency repairs may be performed on an as required basis. (T)
13. The rules and regulations specified for ADSL are in addition to other applicable rules and regulations found in this and other CBT tariffs. (T)
14. CBT shall not be responsible to the customer or to the SP if changes in any of the equipment, operations, or procedures of CBT used in the provision of ADSL, render any facilities provided by the customer or SP obsolete or require modifications or alterations of such equipment or system or otherwise affect its use or performance, provided CBT has met any applicable information disclosure requirements otherwise required by law. (T)
15. CBT does not assume liability for any loss of revenues, increased costs, expenses or inconvenience experienced by the customers due to any unsatisfactory performance of ADSL. Further, CBT shall not assume any liability for consequential, indirect or incidental damages. (T)

D. APPLICABLE RATES AND CHARGES

1. Monthly Charges - Basic Services

The monthly rates associated with the ADSL services, as they appears in this tariff are in addition to the rates that are applicable to all other services, equipment and facilities that are needed for ADSL.

<u>Service Name</u>	<u>Downstream Speed</u>	<u>Upstream Speed</u>	<u>Monthly Rate Residence</u>	<u>Monthly Rate Nonresidence</u>	<u>USOC</u>
CBT High Speed (See Notes 1 & 2)	3.0 Mbps	768 Kbps	29.95	49.95	ADAAK

2. Monthly Charges - Enhancement

The following feature may be purchased in conjunction with the basic ADSL services and is in addition to the monthly rates associated with the ADSL service.

	<u>Monthly Rate Residence</u>	<u>Monthly Rate Nonresidence</u>	<u>USOC</u>
Secure Corporate LAN Connection (See Note 3)	\$ 15.00	\$ 15.00	W2HLA

Note 1: These rates include the charges associated with the initial establishment of the path to the SP's network.

Note 2: These rates apply per access line.

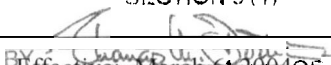

Note 3: These rates apply per connection
